

Project Description

Lively is an application to help music fans make informed decisions about attending a live concert. This is done via a dedicated platform where users can review and discover live music performances. Specifically, Lively addresses the gap between an artist's recorded work versus the quality of their live performance as an overall experience, allowing potential concert-goers to avoid expensive disappointments, while discovering exceptional live performers.

This is done on a community-driven platform where users share and discover authentic concert reviews. Users can leave reviews for a specific artist that includes, artist name, venue, specific date seen, a 1-5 star rating, and a personal narrative from the reviewer. To discover artists, users can search and browse artists by name to research an upcoming event and also read aggregated community feedback to allow confident purchasing decisions. The platform automatically creates artist profiles when users review new performers, growing the database organically. Registered users build personal concert diaries while contributing to the community, and administrators maintain content quality through moderation tools.

Built with Node.js, Express, MongoDB, and vanilla JavaScript, Lively prioritizes performance, security, and ease of use to serve music fans, festival-goers, venue managers, and anyone seeking authentic live music insights.

User Personas

Persona 1: David "The Casual Concert-Goer"

Background: David enjoys music and discovers artists through Spotify playlists and friends' recommendations. He attends concerts occasionally and wants each one to be memorable since he only goes a few times annually.

Goals: Quickly determine if an artist is worth seeing live, make confident ticket purchase decisions, avoid wasting limited concert budget on disappointing shows

Persona 2: Maria "The Festival Veteran"

Background: Maria is deeply passionate about live music.. She treats festival planning strategically, creating detailed schedules to see as many artists as possible. She loves discovering new artists and sharing concert recommendations with friends.

Goals: Share her extensive concert knowledge with the community, maintain a digital diary of all her shows, help fellow fans discover great live performers, research lesser-known festival undercard artists

Persona 3: Amy "The Community Moderator"

Background: Amy moderates Lively's review platform to maintain content quality and community standards. She monitors submissions to ensure reviews provide constructive performance feedback rather than spam or personal attacks against artists.

Goals: Maintain authentic review quality, remove spam and inappropriate content quickly, protect community trust, ensure guidelines are consistently enforced

User Stories

User Story 1: Researching an Artist Before Buying Tickets

As David the Casual Concert-Goer, when I'm considering buying tickets to see Tame Impala for the first time, I want to quickly search for their name and read authentic reviews from people who've seen them live so that I can confidently decide if their \$85 tickets are worth my money before they sell out.

User Flow:

1. David opens Lively on his phone and sees the search bar prominently displayed
2. He types "Tame Impala" into the search field
3. The artist appears in search results showing a 4.8-star average rating
4. He clicks on the artist to view their detail page
5. He sees 23 reviews from various venues and dates over the past two years
6. One reviewer specifically mentions: "Worth every penny - their live show is even better than the albums"
7. Feeling confident, David closes Lively and purchases his ticket

Success Criteria: David finds the information he needs within 2-3 minutes, feels confident in his purchase decision, and actually attends the concert

User Story 2: Submitting Multiple Festival Reviews

As Maria the Festival Veteran, after attending Coachella Weekend 1 where I saw 12 different artists over three days, I want to submit detailed reviews for each performance while the experiences are still fresh so that I can help future festival-goers decide which artists to prioritize and create a permanent record of my weekend.

User Flow:

1. Maria logs into Lively on her laptop Monday evening
2. She navigates to "Leave a Review" and starts with her favorite performance 'Taylor Swift'
3. She fills out the review form and leaves a detailed comment
4. She clicks Submit and receives confirmation: " Review for 'Taylor Swift' submitted successfully!"
5. The form clears and she immediately submits her next review
6. She continues this process, submitting 12 reviews over 45 minutes

7. When finished, she navigates to "My Reviews" and sees all 12 new entries in her growing concert diary (now 139 total reviews)

Success Criteria: Maria successfully submits all 12 reviews without losing data, reviews appear immediately in her history.

User Story 3: Removing an Inappropriate Review

As Admin Amy, when I discover a review containing offensive language and personal attacks against an artist rather than constructive performance feedback, I want to quickly delete that review so that the community remains respectful and focused on helpful information for concert-goers.

User Flow:

1. Amy logs into Lively with her admin credentials
2. She navigates to the Admin Dashboard showing all recent reviews
3. She sees a flagged review (automatically flagged by profanity detection) for Taylor Swift
4. She clicks on the review to read the full content
5. She clicks the "Delete Review" button next to the entry
6. A confirmation modal appears: "Are you sure you want to permanently delete this review? This action cannot be undone."
7. She clicks "Confirm Delete"
8. The system removes the review from the database
9. Success message appears: "Review deleted successfully"
10. Taylor Swift's average rating recalculates automatically, removing this 1-star rating from the aggregate
11. The review disappears from the admin dashboard and Taylor Swift's public artist page
12. Amy logs the action in the moderation notes and continues her review queue

Success Criteria: Amy can identify and remove inappropriate content, confirmation prevents accidental deletion, review is completely removed from public view, artist's average rating updates automatically, legitimate constructive criticism is not censored
